

TEX RICKARD LEASE IN GOOD PAY ROCK

20 Feet of Milling Ore Cut at Depth of 163 Feet—Two Feet of \$40 Rock—Big Plans by the Energetic Leasers.

RHYOLITE, May 10.—"Tex" Rickard has come into ore on his lease on the K. K. claim of the Gold Hills Mining company's estate. The week has developed pay ore in two different places. The property is on a potential shipping basis. Everything coming out of the shaft will sample \$15 to the ton, it is estimated.

The strike in the shaft was made by a crosscut therefrom at a 163-foot depth. The crosscut has been driven southward for an extent of 110 feet. Here the ore was encountered. At the last report twenty-five feet of good ore had been exposed. The lay of the vein is hard to define, as from the breast of the workings back to the point where it was first encountered, all walls are complete. The indications are that the crosscut is coming into the vein at a slight angle. The best streak in the body yet exposed, though not clearly defined, but probably two feet wide, gives values of \$40 and thereabouts. Throughout the entire body values are varied and at times sensational. The ore is quartz and rhyolite, resembling in character, though not

identical therewith, the Pioneer lease rock.

Yesterday crosscuts were started both ways in the ore and the true situation will be determined within a short time. Six more men will be put on sinking the shaft the forepart of the coming week. It is proposed to put this down another 100 feet at once.

The tunnel was resumed a few days ago with one drill in operation. Here another strike of shipping rock has been made. The work is, some forty feet east of the crosscut from the shaft. At least twelve feet of mineralized stuff appears here with neither wall well defined. Substantial streaks of this body pan \$50 to the ton. Every pound of rock now coming out of here is of a good milling grade.

The company is equipped with a three-drill compressor and outfit. It is proposed to continue mining on a big scale. After proving up the lay of the ore in the shaft, "Tex" will provide for another entrance from lower down the hill and start a mammoth production.

OPERATIONS ON MELVIN GROUP

STYLE OF ROLLERS DECIDED ON AND BEING MANUFACTURED.

Operation on the Melvin group of tungsten claims aggregate a total of 850 feet of work in the three crosscut tunnels which have cut a belt estimated to be from 150 to 175 feet wide containing a large number of veins and stringers carrying several thousands tons of ore which will average \$25. At least fifty veins have been cut in the three tunnels of varying width. The values run up from \$6 to \$300 per ton at a conservative estimate. There is a large amount of ore that will average 12 per cent and will make a fine milling product. Manager Goblin expects to start a raise in No. 3 tunnel 150 feet in from the mouth of the tunnel. The raise will be 175 feet to the surface. The glory hole method will be used in handling the ore, shooting it down into the tunnel where a grizzly will be used to good advantage in preparing the rock for use at the mill that is now a certainty. The style of rollers for the mill have been decided on and are now being manufactured. Manager Goblin is also in communication with machinery manufacturers in the east arranging for a new and improved style of separator and when the details of that are settled the plans for the mill will soon be under way and Round Mountain will soon be known as a producer of tungsten acid and have the honor of possessing the second mill in the United States for the production and treatment of that useful metal. The only mill now refining tungsten ores is situated at Boulder, Colorado. Plans are also under way for building a mill at Spokane, Washington, to treat the tungsten ores produced at Murray, Idaho, and Dear Park, Washington.

HIGH-GRADE IS GREAT ON TRAMP PROPERTY

New Lease Has Good Stopping Body of High-Grade—Local Mill Will Make Difference in Grade Handled—Old Dump is Rich.

The new Clothier-Jingle lease on the Denver is still on the improvement. Yesterday there was exposed some eighteen inches of high grade shipping rock in the breast of the drift. The ore is on the old Denver vein and is quartz carrying coarse gold. The values are several hundred dollars to the ton.

The original Clothier-Jingle ground is turning out a good quantity of shipping material every day. The vein here is several feet wide, but is not of uniform high grade. About six inches of rock on the footwall is broken into sacks, the balance requires more careful sorting. A grade of over \$100 per ton is maintained throughout.

The Kullachi-Vucovitch lease has a nice assembly of ore that is ready to be sent out to the sampler.

Doctor F. P. Bowen has put three men to work on his lease on the dump of No. 4 level of the Denver. Very fine returns have been received from the select ore taken from here to date. Operations will continue on a large scale. The ore gathered will be transported to Gold Center and run through the Crystal Bullfrog mill. It is figured that \$15 rock can be handled by this method. There is a world of that grade of ore in sight. The fines and the best values are naturally at the bottom of the dump. It is proposed to treat everything with a coarse sorting.—Bullfrog Miner.

NOTICE TO STOCKHOLDERS.

CRYSTAL BULLFROG MINING CO.
April 21st, 1909.

Notice is hereby given that the annual meeting of the stockholders of Crystal Bullfrog Mining company will be held at the office of said company in the office of Tonopah Extension Mining company, at Tonopah, Nevada, at 11 o'clock a. m. on Monday, May 17, 1909, for the purpose of electing directors, receiving and acting upon reports of officers, amending the by-laws and transacting such other business as may properly come before said meeting.

MOUNTAIN LION FOLLOWS STAGE

The other day as the stage was pulling into Loco Springs from the new camp of Red Butte in the Antelope range of mountains, it was noticed by the passengers that the coach was being followed by a large cougar or mountain lion, as it is more commonly called. On arrival at the station where the horses are changed the animal laid down in the road only a short distance away, apparently waiting for the stage to proceed on its journey. After the change of horses was made and the stage started on its way to the railroad, the lion was lost sight of, probably prowling into the nearby hills. Although the brute could easily have been killed, there was not a gun in the crowd and Roosevelt was in Africa, 6000 miles away.

In the northern part of the county, especially in the Pine Forest range mountain lions are occasionally seen, but this is the first one to be seen in the vicinity of Loco Springs.—Humboldt Star.

more exposed place to store the government's wealth than an interior city the government has just completed the transfer of \$50,000,000 in newly minted gold and silver to the vaults of the Denver mint. The treasure was handled in transit by the Wells Fargo Express company and guarded by messengers sworn in as United States deputy marshals. The transfer was made in several shipments which went during the last month.

BOY MADE MAN BY LEGISLATURE

Former Comstockers now living in Reno are interested in a story recently published in a Goldfield paper and reprinted here, concerning Curtis Lindley, a Virginia City boy who was made a man by a special act of the legislature. Lindley, who is now a San Francisco attorney, was a playmate of a number of Reno residents who made their home in the mining camp at the height of that town's boom.

The story follows:
Ever hear of a boy being made a man by a special act of the legislature?

Nevada is one of the state—if there be any other—that has official

ly raised a minor to an adult by a single stroke of the pen.

True, this occurred forty years ago, but the youth most concerned at this time is now one of the greatest attorneys at law in San Francisco and is the author of books on mining law that are recognized as standard authority.

Away back in 1869, a bill was introduced that is now found on page 77 of the statutes of 1869. It is entitled as follows:

"An act to confer upon Curtis H. Lindley, a minor, the powers, privileges and responsibilities of an adult."

"Section 1—All duties, privileges, responsibility pertaining to male citizens over the age of 21 years, excepting in relation to the sale of real estate, are hereby conferred upon Curtis H. Lindley, a minor."

This is all there is to the law, but it means that Lindley, then probably a youth of 18 or 19, and residing in Virginia City, was suddenly given his majority by legislative enactment. Just why this was, no one seems to know, although several old Comstockers, remember Curtis Lindley very well. Some say it was probably because he was ready to practice law, owing to his having perfected himself in the profession, and could not be admitted before he had reached the age of 21. Others say it might have been because he wanted to get married while still under 21 and had no parents or guardian. This, it is said, may account for the clause "Excepting in relation to the sale of real estate."

Lindley is the author of "Lindley on Mines," of which a second edition has been published and which is

found in nearly every law library in the west. At one time he was a judge of the superior court in San Francisco and is recognized as an exceptionally able attorney and counselor. He was formally admitted to practice law in Nevada on March 14, 1905, when he came to Tonopah to engage in the MacNamara and other big law suits. At that time he was presented a license from the California courts, which gave him entrance in Nevada.
